

Department of Computer Science
Sri Guru Granth Sahib World University
Fatehgarh Sahib

CANDIDATE’S DECLARATION

I, Tinku, hereby certify that the work which is being presented in the project report entitled “Skill + Job Matching System” in fulfillment of the requirements for the award of the Degree of Bachelor of Computer Applications (B.C.A.) submitted to the Department of Computer Science, Sri Guru Granth Sahib World University, Fatehgarh Sahib, is an authentic record of my own work carried out by me during the academic session 2025–2026 under the supervision and guidance of Ms. Rupinder Kaur, Assistant Professor, Department of Computer Science, Sri Guru Granth Sahib World University, Fatehgarh Sahib.

This project has been developed as a part of my Final Year Major Project Submission for the completion of the B.C.A. degree. The work presented in this report is original and has been completed by me with sincere effort, study, analysis, coding, testing, and implementation.

I further declare that the matter embodied in this project report has not been submitted by me earlier for the award of any degree or diploma of this or any other university/institution.

I also certify that all the sources of information used in this project have been duly acknowledged.

This is to certify that the above statement made by the candidate is correct to the best of my knowledge.

Date: _____

ACKNOWLEDGEMENT

I take this opportunity to express my deep sense of gratitude and sincere thanks to all those who have directly or indirectly helped me in the successful completion of my Final Year Project titled “Skill + Job Matching System.”

First and foremost, I would like to express my heartfelt gratitude to my respected project guide Ms. Rupinder Kaur, Assistant Professor, Department of Computer Science, Sri Guru Granth Sahib World University, Fatehgarh Sahib, for her constant guidance, valuable suggestions, constructive criticism, and continuous encouragement throughout the development of this project.

I am also highly thankful to the esteemed faculty members of the Department of Computer Science for providing me with the necessary knowledge, motivation, and resources required to complete this project successfully.

I would like to extend my sincere thanks to Sri Guru Granth Sahib World University, Fatehgarh Sahib, for providing an excellent academic environment and the necessary resources for the successful completion of this final year project.

This project gave me an opportunity to practically apply the concepts of Python Programming, Flask Web Framework, Database Management, Frontend Development, and Intelligent Job Recommendation Techniques learned during the B.C.A. course.

I am also thankful to my friends and classmates for their cooperation, valuable feedback, and moral support during the project development phase.

Last but not the least, I express my deepest gratitude to my family members whose constant blessings, encouragement, and patience motivated me to complete this project with dedication and sincerity.

Presented By:

Tinku

B.C.A Final Year Student

ABSTRACT

The rapid growth of digital recruitment platforms has created numerous job opportunities for candidates; however, one of the major challenges faced by job seekers is identifying suitable jobs according to their individual skills, qualifications, and interests. Many applicants apply randomly without understanding whether their profiles match the job requirements, which often results in poor selection chances and wasted effort. To address this issue, the present project titled “Skill + Job Matching System” has been developed as an intelligent web-based application that helps users find relevant job opportunities based on their personal skills and technical competencies.

The main objective of this project is to design and implement a smart platform that can bridge the gap between job seekers and available employment opportunities by providing skill-based job recommendations. The system allows users to register and log in securely, create their professional profile, upload resumes, enter technical and non-technical skills, and receive matching job suggestions according to the stored database and intelligent matching logic.

This web application has been developed using Python Flask as the backend framework, along with HTML, CSS, Bootstrap, and JavaScript for frontend user interface design. SQLite Database has been used for storing user details, job listings, resumes, and skill information. The system compares user-entered skills with available job requirements and generates the most appropriate matching jobs. In addition to this, the application also provides resume analysis, profile management, job filtering, and an easy-to-use dashboard for better user experience.

The proposed system reduces manual effort in job searching and increases the probability of finding jobs that are more relevant to the candidate’s qualifications. It serves as a practical solution for students, fresh graduates, and beginners who often struggle to identify suitable career opportunities in competitive employment markets.

This final year project not only demonstrates the practical implementation of web development technologies and database management but also highlights the importance of intelligent recommendation systems in modern recruitment processes. The developed application is user-friendly, efficient, scalable, and capable of further enhancement in future with advanced Artificial Intelligence and Machine Learning integration.
